NoSQL refers to a group of databases that are built for some specific data models, e.g. graphs, documents, key-pairs, and wide-columns. Unlike relational databases, NoSQL databases have flexible schemas. NoSQL databases are widely recognized for their ease of development, functionality, and performance at scale.

Standards are easier to enforce in database systems because all the data in database is access through centralized DBMS. Here standards may relate to the naming of data, structure of data, format of the data etc.

Standardizing stored data formats is usually desirable for the purpose of data interchange or migration between systems.
