Cisco Unity Connection allows licensed users to use a third-party IMAP client to access voice messages from their desktop machines. Currently, it is possible only to play voice messages with the IMAP client: there are no replies or forwarding capabilities. Passwords are not synchronized between IMAP clients and the Cisco PCA.

Connection user: Connection plays the message number, time stamp, and name and/or extension of the user who left the message.

Unidentified caller:

Connection plays the message number and time stamp.

Connection may also play the phone number of the caller, if the number is available and if the system is set up to do so.
