Uri Bram uses humour and a great conversational style to get across useful and important concepts in a memorable way. And I stress the "memorable" bit because I now see the need to be on guard from lazy thinking or unintentional abuse of statistics in our normal day-day lives. *Bram's section on selection and sampling biases is dead-on. He uses simple examples and drives home his points. In my applications, this is one of the more important areas for training. We never let junior manufacturing technicians do complex statistical analysis, but we often give them
