The A Series engines are a family of inline-four internal combustion engines with displacement from 1.3 L to 1.8 L produced by Toyota Motor Corporation. The series has cast iron engine blocks and aluminum cylinder heads. To make the engine as short as possible, the cylinders are siamesed. The original 1A engine was only 550 mm (21.6 in) long.

The Toyota E engine family is a straight-four piston engine series, and uses timing belts rather than chains. The E engines were the first multi-valve engines from Toyota designed with economy, practicality and everyday use in mind (rather than performance). Like many other Toyota engines from the era, the E engine series features a cast iron block, along with an aluminium cylinder head.

Toyota's 5S-FE was a 2.2-litre four-cylinder inline petrol engine. The 5S-FE was a non-interference engine and shared many attributes with the 3S-FE, but was distinguished by its increased bore and stroke. Key features of the 5S-FE engine include its cast iron block, aluminium alloy cylinder head, double overhead camshafts and 9.5:1 compression.

Toyota 7A-FE engine reliability, problems and repair. The Toyota 7A engine appeared in 1990 and became the biggest among the A-types. It differs from the basic 4A engine because it has a crankshaft with a piston stroke of 85.5 mm and bigger height of the cylinder block. The cylinder diameter remains the same and the engine itself is an enlarged copy of the 4AFE engine. Toyota produced only one ...
