guide Flashcards ...

Viruses consist of a central core of either DNA or RNA

surrounded by a coating of protein.

The core of the virus that contains the genes is the genome, while the protein coating is the capsid.

Viruses have characteristic shapes. Certain viruses have

the cell to burst(lyse).-
Bacteriophage T4
creates this type of
infection.-It has a
DNA core inside a
protein capsid that
binds to the surface of
the host cell.-The
virus then injects its
own DNA into the cell,
and this cell starts to
make mRNA from the
viral genes.

Questions and Study
Guide ...

Prokaryotes include several kinds of microorganisms, such as bacteria and cyanobacteria.

Eukaryotes include such microorganisms as fungi, protozoa, and simple algae.

Download Ebook Viruses

Viruses are considered neither prokaryotes nor eukaryotes because they lack the characteristics of living things, except the ability to replicate (which they accomplish only in living cells).

Prokaryotes,
Eukaryotes
Prokaryotic ribosomes
contain protein and
ribonucleic acid
(RNA) and are the
locations where
protein is synthesized.
Prokaryotic ribosomes
have a sedimentation
rate of 70S, and are
therefore known as
70S ribosomes.
(Eukaryotic cells have

Download Ebook Viruses

80S ribosomes.)

Certain antibiotics bind to these ribosomes and inhibit protein synthesis.
